

VACUUM-TWEEZER BV-03

the answer to microcomponents handling

The vacuum-tweezers BV-03 is particularly studied for watchmakers working station. The storage base avoids overloading the desk space with loose hoses. The small diameter of the tool, its lightness and the suction control over a weak spring pusher ensure a continuous use without tiredness. The interchangeable connector can be custom-built, in material and shape, to be adapted to the worked on parts.

Case of use for the vacuum-tweezers BV-03:

- Hands handling
- Handling and assembling components of watch-movement
- Handling of watchmaking jewels
- Handling and laying of dials index
- Counting and preparing of components kits
- Etc...

Strong points:

- Instant release of the components
- Choice of adequate joining pieces according to the ongoing work
- Protects the components from scratches
- Elementary starting up and use
- Instant change of tool
