

# EBATEST

## New stand for measuring the going train clearance

An easy and precise stand that allows, with a specific movement-holder, the measuring of the clearance of crossing going train, by applying a counteracting force on the upper pivot of the wheel. The device is equipped with an interchangeable measuring under point with an automatic reset and a mechanism synchronising the rise of the sensor, when the counter weight is being released.

A mirrored panel, PVD treated, facilitates the choice of the wheel to measure.

Use :

N° VOH : 17.01476

- Heidenhain MT 1201 measuring sensor (art. VOH 17.00351)
- METRO Microvision display unit (art. VOH 17.01386)
- Carte mémoire (en option) destinée à recevoir des dispositifs de stockage de masse pour la traçabilité des données (art. VOH 17.01417)

These 3 items are not included in the price of EBATEST and must be ordered separately.
