

LUNEXTRA

For manual removal of fixed bezels and pressured backs without damaging elements of the watchcase

art VOH 29.00063

This compact unit combines simplicity and thoroughness. Adapted to any type of watch with fixed bezel or pressured backs, it is the result of a thinking process based on the preservation of the product. A stabilisation system in plastic is holding the watch in position while a metal blade is being inserted under the bezel or the watch-back. The stability of the watch immobility of the watch allows the blade to a steady progress under the bezel and thus ensures that no scratches or damages occurs.

Advantages:

- Quick and intuitive bringing into service
- Accurate shifting of the blade thanks to a knurling wheel
- No pre-adjustment necessary
- The change of watch model requires no modification of the device
- Suitable for right or left hander
- Low force required for the extraction
- Without external energy source

Lunextra F
